

# Florian Straede

*Plastics Technology  
Service & Solutions*

# Me

As an experienced process specialist in the plastics industry, I deal daily with your questions in the areas of pelletizing technology, melt filtration and extrusion.

Now 20 years of professional experience in various industrial companies enable me to take a targeted look at your situation: independently.

Florian Straede, B.Sc.

# The difference

- A needs-based collaboration on an equal footing
- Holistic and independent approach, tailored specifically to you
- We focus on your needs and develop tailor-made solutions with our partners
- When procuring spare parts or components, independence is immensely important for production success, that's what we offer!

# Portfolio

- Process optimization and troubleshooting
- Test and sampling support
- Training & workshops
- System and manufacturer advice
- Design of granulation die plates
- Spare parts storage and procurement
- Project support and interim management
- System service

We offer real customer proximity and fast response times to deal with your questions precisely.

- Your granulation is not running optimally?
- A new product is giving you a headache and you may need a new perforated plate?
- Your production team needs a new look at your machine and you are concerned about process questions?

***No problem, because these are exactly our specialties!***

# Die plates

As the core component of granulation, the granulation hole plate is often underestimated in its function. It has rheologically optimized flow channels and is manufactured for the specific application. This depends on the product to be processed, but also on its influencing factors.

Is there a high mechanical load, is corrosion to be expected, or is the wear too high?

All of these questions form the basis for production at the highest level and can be eliminated through the targeted use of optimized materials.

***We will be happy to advise you!***
